each with **20** \times **20** crosspoints. In the third stage we have 20 crosspoints each with 19×10 crosspoints. The total number of crosspoints is $20 (10 \times 19) + 19 (\mathbf{20} \times \mathbf{20}) = \mathbf{15200}$.

If we use a single-stage switch, we need $200 \times 200 = 40,000$ crosspoints. The number of crosspoints in this three-stage switch is **38** percent that of a
